

Snowplows for pickup trucks

Snowplows for pickup trucks

Metec snowplows for pickup trucks are devices with a strong construction and reliable components to perform snow control operations effectively.

V-shaped joint plow has 2 shares and the equipment including a diagonal valve that enables the operator to move both plow shares together or independently. Floating system enables to cope with the varying road surface.

By switching the floating system off, the plow is fixed stiffly to a position. The pickup truck plow is fixed to the frame and frame is fixed to the car with model based adapter. Fixing adapter to the car is drill free. You can operate the pickup truck plow remotely. Automatic reverse system lifts the plow up when you switch off reverse.

Advantages:

Optimal weight less than 150kg

Floating system, parallelogram, aut. reverse

Model based drill free adapters for all new pickup truck models
